

# Cross Integration Suite™

A Complete Agile IT-OT hybrid and cloud-based  
Integration Platform-as-a-Service (iPaaS)

# Cross Integration Suite™

## Highlights

- *IT-OT System, Data, and Security Integration Platform*
- *Hybrid cloud-based iPaaS*
- *Microservices based Architecture*
- *Zero Trust Architecture Security*
- *Agile Integration Suite of Products*
  - Cross System Integrator
  - Cross Data Integrator
  - Cross Security Manager

The **Cross Integration Suite** is a suite of hybrid cloud services enabling Utilities to develop, execute, and govern integration flows with a Zero Trust Architecture between disparate Information Technology (IT) and Operational Technology (OT) applications, systems and devices.

Under the agile, hybrid cloud-based iPaaS integration model, utilities drive the development and deployment of Systems, Data, and Security integration without installing and managing hardware or middleware.

The **Cross Integration Suite** from 3Insys was created to simplify the integration of new and legacy systems, break-down the data silos, improve connectivity, and optimize business processes.

Collectively, today's systems generate massive amounts of data which get stored in various files, databases, data warehouses, and other data storage locations throughout the company. With data being one of a utility's most important asset, ensuring that only valid users can access the data, managing and maintaining the identities for the users, and enforcing access policies is imperative.

The **Cross Integration Suite** eco-system consists of the Cross System Integrator (XSI), Cross Data Integrator (XDI), and Cross Security Manager (XSM) solutions that create a Zero Trust integration Environment.

- **SYSTEMS** - Share data between IT applications and between OT devices (IoT, IIoT, edge computing devices, sensors, and mobile devices).
- **DATA** - Harmonize all company data no matter where the data is located, stored, or siloed.
- **SECURITY** - Deliver Identity and Access Management and API security to protect systems and data to minimize fraud.

**XSI**

Cross System Integrator

- **Connect** IT applications (new or old, on-premises or cloud) and OT devices quickly.
- Enable data to **Flow** between IT applications and OT devices without involving vendors to write custom code.
- **Automate** business processes (data flows) as the business and needs change.
- **Grow** the performance of the company by delivering an enterprise-wide platform for integration.

**XDI**

Cross Data Integrator

- **Connect** to files, databases, or other storage areas inside or outside the company.
- **Collect** the data from every data source.
- **Prepare** the data by transforming it into a standard structure/schema for Business Intelligence applications or archived for future use.
- **Centralize** company data by storing it in an enterprise Data Warehouse.

**XSM**

Cross Security Manager

- **Protect** access to company data and user information.
- **Authorize** access to data from authenticated users.
- **Detect** anomalies and identify fraudulent activity.
- **Engage** customers and employees without overburdening them.
- **Ensure** compliance and privacy management policies are adhered to.

"Utilities thrive in a connected world and being able to monitor, know, and act in real-time enables utilities to increase efficiency and deliver superb customer service, and this is what we are helping them to do."

- **Aras Raiani, CEO**

# The Cross Integration Suite

## Making integration as easy as plug-and-play

“The Cross Integration Suite allows utilities to make Integration a *forethought* in their modernization projects, not an afterthought.”

- Allan Rakos , EVP

3Insys is the ONE IT-OT Agile Integration suite for the Energy and Utility sector that provides cloud-based integration Platform-as-a-Service (iPaaS) solutions for System Integration, Data Integration, Identity Management, API Management, and RPA. Our company assists utilities to securely orchestrate data flows and robotize complex operational processes throughout their disparate IT and OT systems and environments.
