3Insys's EVES Management Platform enables energy utilities providers an opportunity to orchestrate and offer their customers unique services across the customer journey. By allowing customers to better manage and control their electric vehicles, home batteries and private charging in single integrated PaaS solution – Providing Grid Reliability, Sustainability and Asset Protection. This platform allows utilities to invest smartly and provide bundled experiences that support the delivery of seamless, more satisfying customer experiences.

- ✓ Prepare for an EV-dominated future and accelerate electric vehicles adoption
- ✓ Ramp up the EV charging infrastructure by proactively anticipating customer demands
- ✓ Become a trusted energy advisor and guide customers throughout the process of EV ownership
- ✓ Educate and incentivize customers in real time to address grid ad load management
- ✓ Shift customer consumption to clean energy (Net Zero)
